

RingCentral Quick Dialer

User Guide

Turn any web page into a one-click call list. RingCentral Quick Dialer finds phone numbers on web pages, lets you build a dialing queue, and can automatically move to the next number after a call ends.

Install:

<https://chromewebstore.google.com/detail/ringcentral-quick-dialer/ldjckpipdcjhkaefdgldkimakkogneck>

RingCentral Labs apps are experimental and do not include an SLA or formal RingCentral Support coverage outside community channels.

1. Install From The Chrome Web Store

- 1 Open the RingCentral Quick Dialer listing in the Chrome Web Store:
<https://chromewebstore.google.com/detail/ringcentral-quick-dialer/ldjckpipdcjhkaefdgldkimakkogneck>.
- 2 Click **Add to Chrome**.
- 3 Confirm the permissions prompt.
- 4 Pin the extension from Chrome's puzzle-piece menu so it is easy to open.

Chrome installs the extension and handles future updates automatically when new versions are published.

2. Connect Your RingCentral Account

- 1 Click the Quick Dialer icon in the Chrome toolbar to open the side panel.
- 2 Open the **Settings** tab.
- 3 Click **Connect to RingCentral**.
- 4 Sign in with your normal RingCentral credentials and approve access.
- 5 When the window closes, Settings shows **Connected** with a green indicator.

3. Add Numbers

Method	Use it when	What to do
Scrape a page	Phone numbers are visible in normal webpage text.	Click the Found tab, select numbers, then click Add to call list.
Paste numbers	The source is Google Sheets, Excel, CSV, or a page that exposes numbers in a structured format.	Copy a page of numbers, then click Paste numbers, then add the parsed numbers.
Call directly	You only need one number.	Click Call beside a number in the Found tab.

4. Work Through The Call List

- **Call next** dials the top item in the call list.
- **Up next** marks the number that will dial next.
- Drag rows to reorder your queue.
- Use **Clear list** when you want to start fresh.
- Turn on **Auto-dial** to move to the next number after a call ends.

5. Configure Auto-Dial Timing

In Settings, choose how long Quick Dialer waits after RingCentral reports a call has ended. Start with 5 seconds if you want a balance between note-taking time and dialing momentum.

Troubleshooting

- **Authorization page could not be loaded:** contact your administrator so the RingCentral OAuth redirect URI can be checked.
- **Extension is not visible:** confirm it is installed from the Chrome Web Store, then pin it from Chrome's puzzle-piece menu.
- **Numbers are not detected:** use Paste numbers for Google Sheets, Salesforce canvas views, or other pages that do not expose normal text.
- **Auto-dial does not fire:** confirm Auto-dial is on, the interval is not Off, and the call list still has numbers.

Privacy

- Page scanning runs locally in Chrome.
- Phone numbers and call queues stay in browser storage.
- OAuth tokens are stored in Chrome extension storage and used only to authenticate with RingCentral.
- The extension talks directly to RingCentral and Chrome APIs; no third-party servers are involved.
